

SOLUBILIZES PHOSPHORUS FOR OPTIMAL NUTRIENT ABSORPTION

LALRISE VITA is a plant growth promoting microorganism (PGPM) that is uniquely formulated with the microbe, *Bacillus velezensis*. This bacterium actively enhances root growth and exploration, solubilizes phosphorus, and promotes healthy plant vigor.

MODES OF ACTION

- Rapidly colonizes plant roots for quick establishment and growth. This enhances nutrient availability to the plant.
- Improves root structure and biomass for great water and nutrient uptake.
- Actively release fixed phosphorus in plant-available forms, making it up to 28% more available to the plant.*

ADVANTAGES

- Promotes plant establishment through improved root vigor and nutrient availability.
- Improves growth and quality in young plants.
- Increases crop homogeneity, height, root mass, winter vigor, flowering, and yields.

✓ **SOLUBILIZES PHOSPHORUS:**
Up to 28% increase of Phosphorus available in the rhizosphere*

✓ **NUTRIENT AVAILABILITY IMPROVES ROOT MASS GROWTH:**
Up to +20% of root biomass*

APPLICATION

3 applications, starting at bud break (1 per month)

APPLICATION METHOD

Drip irrigation

CONDITIONS AT APPLICATION: Optimal temperature between 50°F and 86°F (10°C and 30°C). Apply preferably to moist soils or growing media. For drier climates, it is recommended to irrigate enough after application to move the product below the soil surface. Avoid applications during high-temperature periods and on dry soils.

APPLICATION RATES

Trees, Ornamentals, and Turf
