

CHARACTERISTICS

Active Ingredient
8 x 10⁸ *Rhizobium leguminosarum* biovar *viciae* per ml

Package Size
3.25 Gallon bladder
(416 fl oz / 12.3 L)

On-Seed Application Rate
• 2.5 fl oz per bushel, 2.0 fl oz per 50 lbs unit
• 1 case treats 10,000 lbs of seed

In-furrow Application Rate
• 15.5 fl oz (443ml) per acre
• 1 case treats 28 acres

Always read and follow label instructions

TWO-STRAIN LIQUID INOCULANT FOR PEA & LENTIL

LALFIX® LIQUID Pea & Lentil contains two strains of *Rhizobium leguminosarum* biovar *viciae* selected for enhanced performance and competitiveness in pea and lentil production. These two strains are known to nodulate pea & lentil roots and fix atmospheric nitrogen in a symbiotic relationship with the plant.

ADVANTAGES

- LALFIX® LIQUID Pea & Lentil can be applied on-seed or in-furrow.
- LALFIX® LIQUID Pea & Lentil in-furrow delivers a large quantity of Rhizobium directly to the soil – in-furrow use rate of 15 fl oz per acre.
- Apply LALFIX® LIQUID Pea & Lentil inoculant in-furrow with a minimum of 10 US gallons of clean, non-chlorinated water per acre and calibrate delivery mechanism accordingly.
- Lallemand Plant Care recommends using an on-seed inoculant along with an in-furrow application of LALFIX® START SPHERICAL Pea & Lentil to increase the rhizobia available to the crop.
- Application rate of LALFIX® LIQUID Pea & Lentil in-furrow should be increased if this is the sole form of inoculant.

About Lallemand Plant Care

Since the beginning of the 20th Century, LALLEMAND has been an expert in yeast and bacteria manufacturing. The family-owned company is now a global leader in the development, production, and marketing of microorganisms for various agri-food industries. Using sound science and know-how, LALLEMAND PLANT CARE (LPC) works closely with clients to deliver the right technology, in the right formulation, for the right application. LPC is committed to solving grower challenges, significantly improving yield and crop vitality.
