

DUAL-STRAIN LIQUID INOCULANT FOR PEA, LENTIL, AND FABA BEAN

LALFIX[®] LIQUID Pea & Lentil contains two strains of *Rhizobium leguminosarum* biovar *viciae* selected for enhanced performance and competitiveness in pea, lentil, and faba bean production. These two strains are known to nodulate pea, lentil, and faba bean roots and fix atmospheric nitrogen in a symbiotic relationship with the plant.

ADVANTAGES

- **LALFIX LIQUID Pea & Lentil** can be applied on-seed or in-furrow.
- **LALFIX LIQUID Pea & Lentil** in-furrow delivers a large quantity of *Rhizobium* directly to the soil.
- Apply **LALFIX LIQUID Pea & Lentil** inoculant in-furrow with a minimum of 10 US gallons of clean, non-chlorinated water per acre and calibrate delivery mechanism accordingly.
- Lallemand Plant Care recommends using an on-seed inoculant along with an in-furrow application of **LALFIX[®] START SPHERICAL Pulses** to increase the rhizobia available to the crop.
- Application rate of **LALFIX LIQUID Pea & Lentil** in-furrow should be increased if this is the sole form of inoculant.

CHARACTERISTICS

Active Ingredient

8 x 10⁸ *Rhizobium leguminosarum* biovar *viciae* CFU/ml

Package Size

3.25 gallon bladder (416 oz)

Always read and follow label instructions.

APPLICATION RATE

ON-SEED

- 2.5 fl oz per bushel, 4.0 fl oz per 100 lbs
- 1 case treats 10,000 lbs of seed

IN-FURROW

- 15.5 fl oz (443ml) per acre
- 1 case treats 28 acres
- Apply with minimum 10 gallons water

About Lallemand Plant Care

Since the beginning of the 20th Century, LALLEMAND has been an expert in yeast and bacteria manufacturing. The family-owned company is now a global leader in the development, production, and marketing of microorganisms for various agri-food industries. Using sound science and know-how, LALLEMAND PLANT CARE (LPC) works closely with clients to deliver the right technology, in the right formulation, for the right application. LPC is committed to solving grower challenges, significantly improving yield and crop vitality.
