INOCULANT

DUAL-STRAIN PEAT INOCULANT FOR SOYBEANS

LALFIX[®] PEAT Soybean is a high quality, dual-strain sterile powder peat inoculant that contains a select peat carrier that aids in the adhesion of the inoculant to the seed. This product can be applied on the seed through a variety of application methods that suit the grower's needs.

ADVANTAGES

- **LALFIX PEAT Soybean** is based on a sterile peat powder media which allows for an elevated delivery of *Bradyrhizobium elkanii* cells directly to the seed.
- **LALFIX PEAT Soybean** contains two unique strains of *Bradyrhizobium elkanii* for early and aggressive nodulation as well as balanced performance in a range of environments.
- **LALFIX PEAT Soybean** contains a select peat carrier, which means better adhesion to the seed putting more inoculant in the furrow.
- **LALFIX PEAT Soybean** is applied to the seed without water. Therefore, there is no drying period.
- **LALFIX PEAT Soybean** can be used to double-inoculate first-year soybean fields with a lower carryover of background rhizobia.
- Applying **LALFIX PEAT Soybean** with an in-furrow application of **LALFIX[®] SPHERICAL Soybean** inoculant or **LALFIX[®] PROYIELD Liquid Soybean** increases and diversifies the rhizobia available to the crop.

CHARACTERISTICS

Active Ingredient

4 x 10⁹ *Bradyrhizobium elkanii* CFU/g

Package Size

- 6 x 1.2 kg case (6 x 42 oz packets per case)

Always read and follow label instructions.

ON-SEED APPLICATION RATE

- 80 g per 45.4 kg of seed (2.8 oz per 100 lbs of seed)
- 1 case treats 4080 kg (180 units)

About Lallemand Plant Care

For over 100 years, Lallemand has been an expert in yeast and bacteria manufacturing. It is now a global leader in the development, production, and marketing of microorganisms for various industries. Using sound science and know-how, Lallemand Plant Care provides effective microbial-based solutions that deliver agronomic, economic, and sustainable value to growers.
